RELEASE NOTES

COMPASS 4.3.2 UPDATES FOR GALAXY, CAL, AND RMSERVER

Compass 4.3.2 software requires the following firmware versions:

- GALAXY Firmware v1.3.2 (All models)

- Bluehorn 816 v1.3.2

- RMServer v2.3.1

- CAL v1.4.0

COMPASS FEATURES & ENHANCEMENTS

Firmware Hotfix (Addresses Real Time Clock Hardware Field Kit: MSPN 40.230.029.01):

- This version of Compass allows the installation of updated embedded firmware to support the RTC hardware field replacement kit. This update is only required if your GALAXY or Bluehorn Processor serial number is less than:
  18138357 - (GALAXY 816)
  18138483 - (GALAXY 816 AES)
  18138395 - (GALAXY 408)
  18139315 - (Bluehorn 816)

- Please contact Meyer Sound Service for more information: service@meyersound.com.

BUG FIXES

- Fixed a bug that occurred when upgrading a GALAXY from any previous version to 1.3.0. Migration of the project file when opened would corrupt the matrix inserts AVB configuration. This corruption will prevent the user from saving the AVB configuration for any of the matrix inserts or input "A." Affected users can recover their project by installing the this update and reloading the project that was saved under version 1.2.4 or older.
