

# Custom Color Paint for Loudspeakers

# Seamless Loudspeaker Integration in All Colors

At Meyer Sound, customers can request to have their loudspeakers in any color, made custom for their project. Custom color means we are not limited to a fixed palette and can support our customers' exact needs, whether that be green UPQ-1P loudspeakers behind the foliage for the Mirage Volcano in Las Vegas, or gold MM-4 loudspeakers hidden in chandeliers in a Norwegian parliament building.

We apply the same quality assurance processes to our custom color orders for the largest theme parks as we do for our smaller projects. We're not just painting wood, but also plastic, metal, mesh—and each of these requires a different type of paint to ensure the components all look the same. Our paintwork is a protection system that we apply from the base coat to the top coat for both standard and non-standard colors, and all elements including ultra weather protection where applicable, are thoroughly tested using internationally known methodologies to ensure durability and consistency. We do both appearance and performance tests that look at adhesion, corrosion resistance, and elasticity.

## SALES FACTS

- On orders of 10 or more speakers a custom color paint job is free. If there are mounting grids, yokes, or brackets on the same order they will be painted in the same custom color free as well.
- An order of less than 10 speakers can still be painted in a custom color for a nominal fee.
- Custom color orders take approximately 6 weeks.
- We can match from RAL numbers, manufacturer specifications or physical samples.

7. Norwegian Parliament | Oslo, Norway
8. Teatro Juarez | Guanajuato, México

## Meyer Sound Solutions

Meyer Sound continually strives to elevate the overall dialogue about sound and bring greater awareness to the importance of how we hear and listen. A collaborative, results-focused approach to sound solutions drives a company philosophy where creative thinking, craftsmanship, and entrepreneurial technology are strongly intertwined. Tours for top-grossing artists and respected concert and entertainment venues rely on Meyer Sound, as do houses of worship, cinemas, restaurants, universities, corporate offices, and museums.

## Quality Service & Longterm Investment

With field offices and authorized distributors worldwide, Meyer Sound designs and manufactures all products at its Berkeley, California headquarters, allowing for rigorous quality control and testing, and starting in 2018, all products are covered by a five-year warranty. Scientific acoustical research and product development have earned Meyer Sound more than 100 US and international patents and numerous awards since its founding in 1979 by John and Helen Meyer. With Meyer Sound, audio practitioners also benefit from a full package of system design and validation tools, training, and support, all of which are provided to make exceptional listening experiences easier to achieve.
